

## Automatic Liquid Filling Machine

Our Automatic liquid filling equipment is of world-renowned quality with efficiency, precision, dependability, and flawless finishing, which can fill 40 bottles per minute. It supports industries like Chemicals, pharmaceuticals, cosmetics, food, and beverages. Advanced technology is included in an automatic liquid filling machine to enable accurate and consistent filling of liquids, from thin to very viscous materials like juice, ghee, oil, milk, syrup, honey, and more liquid products.

Our automatic liquid filling machine's adaptability is one of its essential characteristics. Bottles, jars, cans, and pouches are just a few of the many sizes and forms of containers they can handle. We have a filling volume in the range of 250 -1000ml with a buffer tank of 100 litres capacity. Our machines may also be customized to meet certain filling needs, such as those for hot, cold, and aseptic filling.

We are specialized in customizing our liquid filling machines according to the client's products, some of our liquid filling machines include Automatic Oil Filling Machines, Automatic Juice Filling Machines, Automatic Milk Filling Machines, Automatic Ghee Filling Machines, Automatic Syrup Filling Machine, Honey Filling Machine, Automatic Lubricant Filling Machine 1 Itr, Automatic Waterproofing Material Liquid Filling Machine, Automatic Pesticides Filling Machine, Automatic 8 Head Volumetric Filling Machine, Automatic Two Head Mechanical Filling Machine, Automatic Sharbat Filling Machine, Automatic Deodorant Filling Machine & Coconut Oil Filling Machine.

## Viscous Liquid Filling Machine

A maximum speed of 120 bottles per minute can be filled by the automatic six-head volumetric liquid bottle-filling machine. Bottle diameter, bottle height, bottleneck size, and fill volume all affect how well a bottle-filling machine performs. Completely stainless steel finished machine construction, including the machine frame. For smoother operation, the machine has optional turn tables at the infeed and outfeed that have individual drives to match the pace of the bottles coming in and going out. All components that will come into touch with liquids are constructed from SS 316 materials.

We specialize in providing specialized viscous filling equipment that may be used to melt down different goods including balm, hot balm, wax, lip balm, and cream to fill them.

We offer equipment for filling paint buckets and other types of containers with viscous and semi-viscous fluids. The machines are of the rationally designed auto piston kind. Our machines are well-liked because they deliver noiseless heavy-duty performance and are cost-effective. It can be used as an automatic gel filler, automatic cream filler, automatic sauce filler, automatic solvent filler, automatic water paint filler, and automatic wall paint filler.

## Capping Machine

The Automatic Screw cap sealing machine has a height-adjustable adjustment system and is adaptable and self-supporting on a stainless steel leg. The machine is precisely constructed on a strong, welded steel frame that is entirely covered in stainless steel sheeting. Doors have been included to make servicing the machine simpler.

Our cap-sealing machines are customizable according to the size needed as well it is proficient to connect to a liquid filling machine that ends up connecting it to a complete process machine.

Our automatic capping machines include automatic screw capping machine, automatic screw capping machine with elevator, automatic ropp capping machine, automatic inner and outer capping machine, induction seal capping machine, automatic pneumatic operation linear capping machine, automatic crown capping machine, automatic screw cap sealing machine, automatic lug capping machine, automatic multi-head screw capping machine, automatic spindle capping machine, and automatic multi-head lug capping machine.

## Labelling Machine

One of the most user-friendly machines is the Automatic Sticker Labelling Machine. The device is used to fully or partially wrap labels around various-sized spherical containers. The automatic type has a roller spacing system, making it easy to operate and requiring no additional parts.

## Other few machines & Accessories :

- Turntable
- Linear Volumetric liquid filling machine
- Inner Plug Pressing Machine(Belt Pressing Type)
- Inner Plug Pressing Machine(Bunking Type)
- Auto Cap Tightening Machine
- On-line Induction Wad Sealing machine
- Inkjet Printer
- Automatic Sticker Labelling machine
- Rotary Pesticide filling machine
- Paraquat Filling machine
- SC Filling Machine

## About us:

We are manufacturers of bottle-filling machines with 25 years of unmatched quality and service in the industry, Lakshmi Industries has established solid roots. The seed thought was to develop a liquid filling machine industry as there were no reliable bottling machinery manufacturers in the Southern Hub. Sri Lakshmi Industries was born to be a solution for all such issues and was set up at Chennai and constructed two factories in SIDCO, Thirumudivakkam, Chennai – 600 044 having a total constructed area of 14,000 sq. Ft. with full-fledged manufacturing facilities.

Moreover, these experts are aware of industry standards and provide items that meet them. We can efficiently satisfy the clients' urgent and large-scale requirements with our cutting-edge infrastructure. We can develop a best-in-class assortment of articles for our clients with the cutting-edge facilities we have on hand.

 SRI LAKSHMI INDUSTRIES
